Table of tables

1. Introduction

The first group assignment for the Introduction to Information Systems, our module leader, Mr Hrishav Tandukar, assigned us to create an e-commerce website for a business that sells different watches. There were some obstacles to overcome when creating this e-commerce website because all the members at group were new and unfamiliar with the idea of creating a complete website using HTML, CSS and JavaScript. However, we successfully completed the project in the end.

For this project, we are going to making an e-commerce website using other six different webpages. Firstly, the users are introduced to smart watches while they click the website in the index page, i.e. home page. Along with that they are able to purchase various smart watches according to their needs. They can also use customer care and contact us through about us section. Users can get information about the company whose watches are listed at the e-commerce website in the blog section.

2. Discussion and Analysis

In order to have a clear knowledge of what should and shouldn't be done for your website, we must create a prototype before we can create a properly operating website. Balsamiq is used to create a wireframe for a prototype. A wireframe is a dimensional representation of a page's interface that focuses on content priority, space allocation, accessible features and desired actions. Because of these factors, wireframes usually don't have any images, colour or styling. Additionally, a text editor is utilized for coding while creating a website. The text editor we will be utilizing is Visual Studio Code. The website is programmed using HTML, CSS and JavaScript.

2.1. Visual Studio Code

With a focus on code editing for a range of development contexts, such as online, mobile, and cloud development, Visual Studio Code is an open source and cross-platform programming tool. Write and debug code fast and effectively with Visual Studio Code on every platform, device, programming language, and operating system of your choosing (Del Sole, 2019).
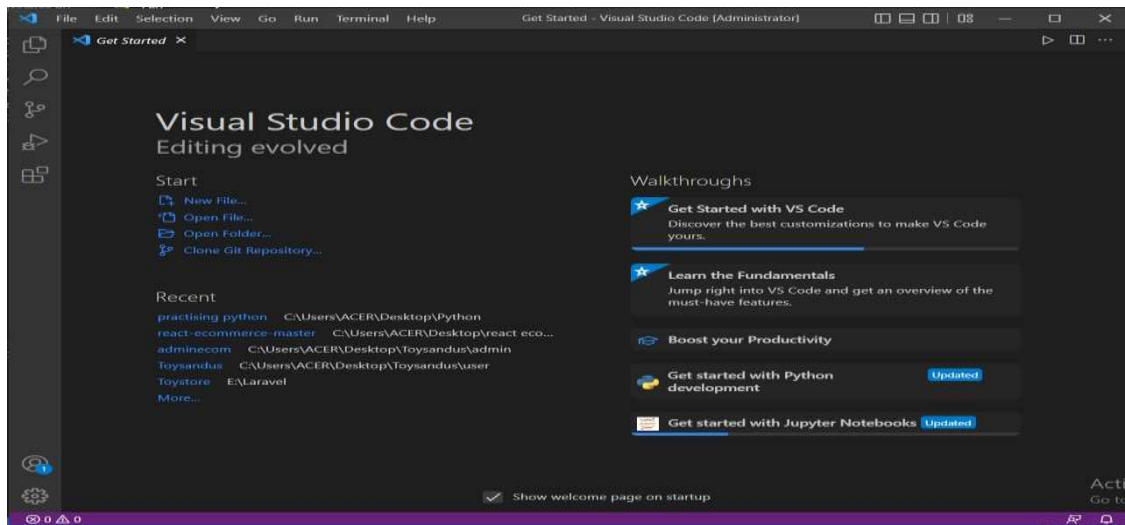

Figure 1 Visual Studio Code

2.2. Balsamiq Mock-up's

Balsamiq Mock-up's is a graphical user interface mock-ups builder application which allows users to arrange pre-built widgets using a drag and drop editor. The program is offered in a desktop version as well as a plug-in for Google Drive Confluence and JIRA.
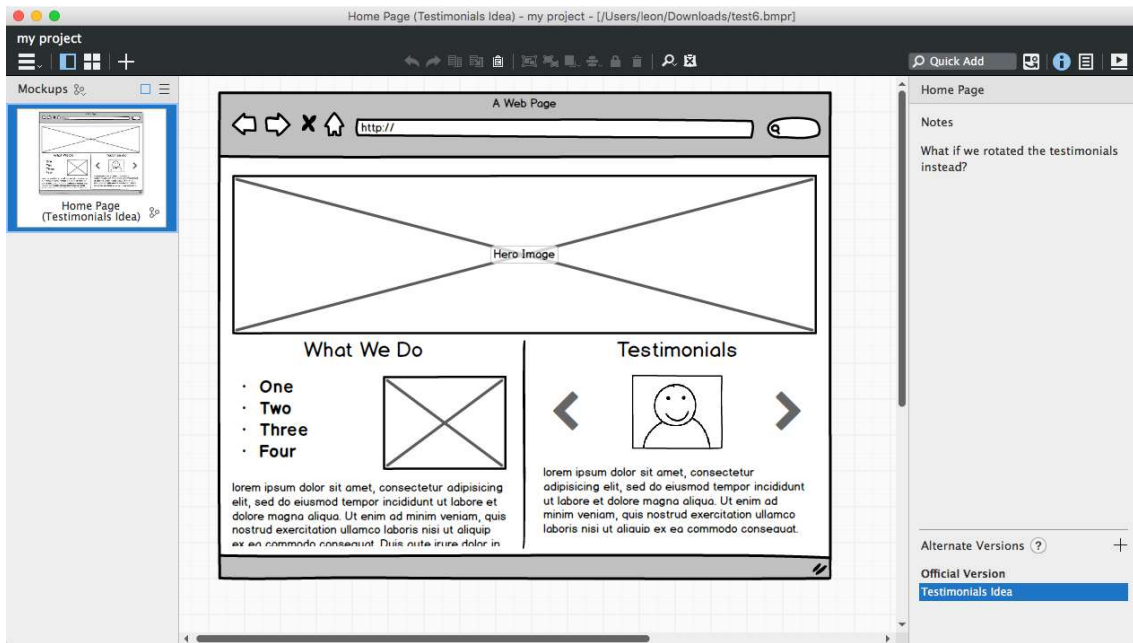

Figure 2 Balsamiq Mock-ups

2.3. HTML

The coding that organizes a web page and its contents is called HTML (Hyper Text Markup Language). Content might be organized, for instance, using data tables and graphics, a list of bulleted points, or a series of paragraphs (Castro, 2003).

Figure 3 HTML

2.4. CSS

With Cascading Style Sheets (CSS), you may define the presentation and visual style of your online application. You can distinguish between style and structure using CSS. This implies that you are examining less code while interacting with your page. Keeping design distinct from content and organization also makes things easier to manage. A collection of programmable rules called Cascading Style Sheets specify how the material on your web pages is displayed (Grant, 2024).

Figure 4 CSS

2.5. JavaScript

JavaScript is the programming language of the Web. JavaScript is a high-level, dynamic, untyped interpreted programming language that is well-suited to object-oriented and functional programming styles. Java Script derives its syntax from Java (Flanagan, 2011).
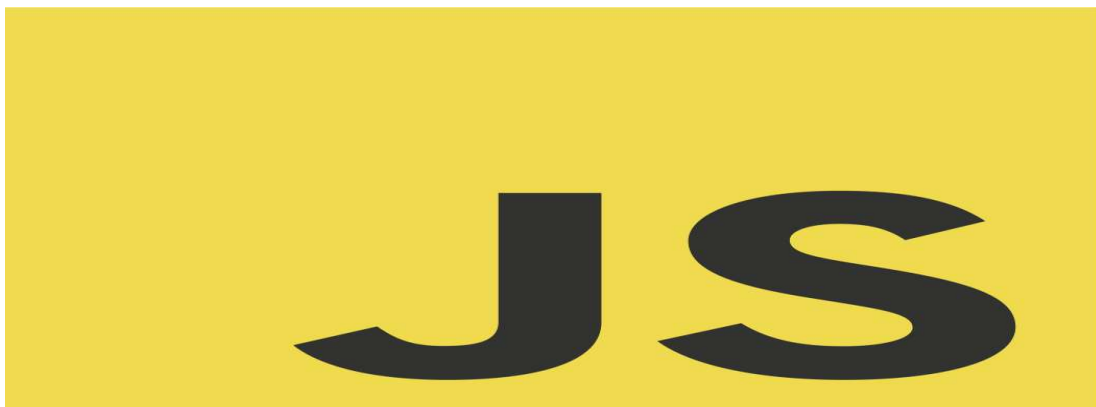

Figure 5 JavaScript

3. Webpages and their wireframes

Wireframes are simple back and white layouts that outline the exact size and placement of your website's page elements, site features, conversion areas, and navigation.

3.1. Homepage

Any website's homepage is its default or homepage. To offer the consumer a clear idea of what to expect from the e-commerce site, the homepage of this website provides descriptions of the different latest smartwatches.
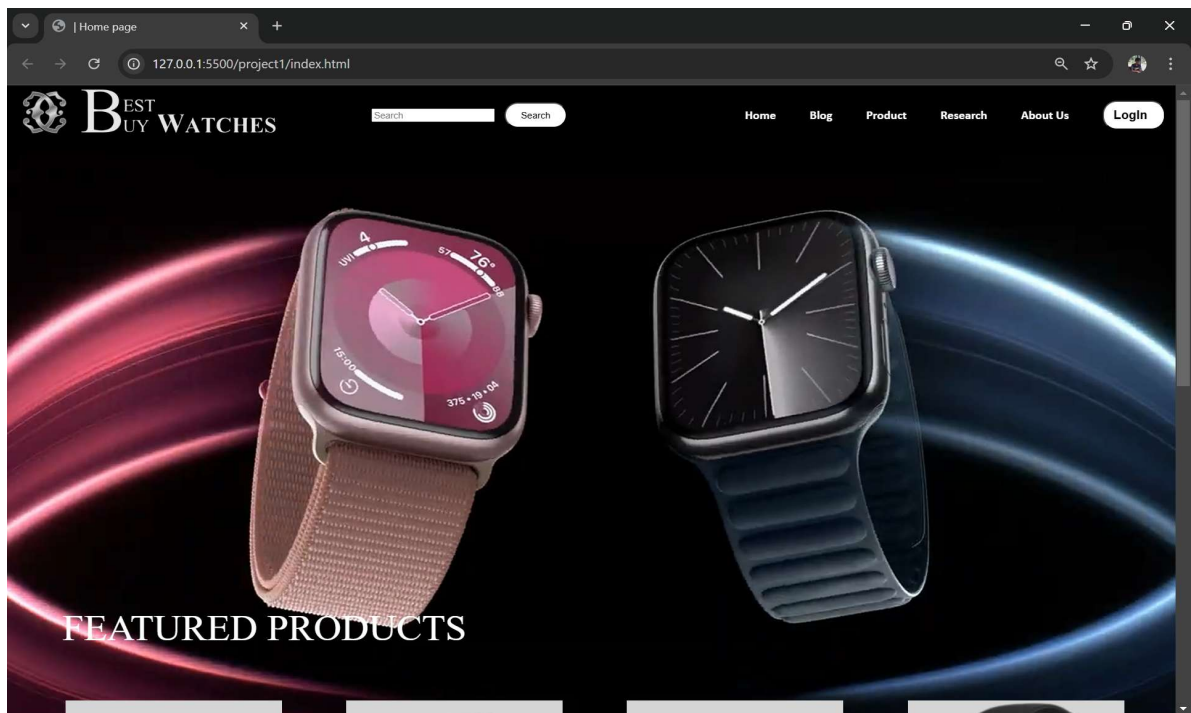

Figure 6 Homepage Web
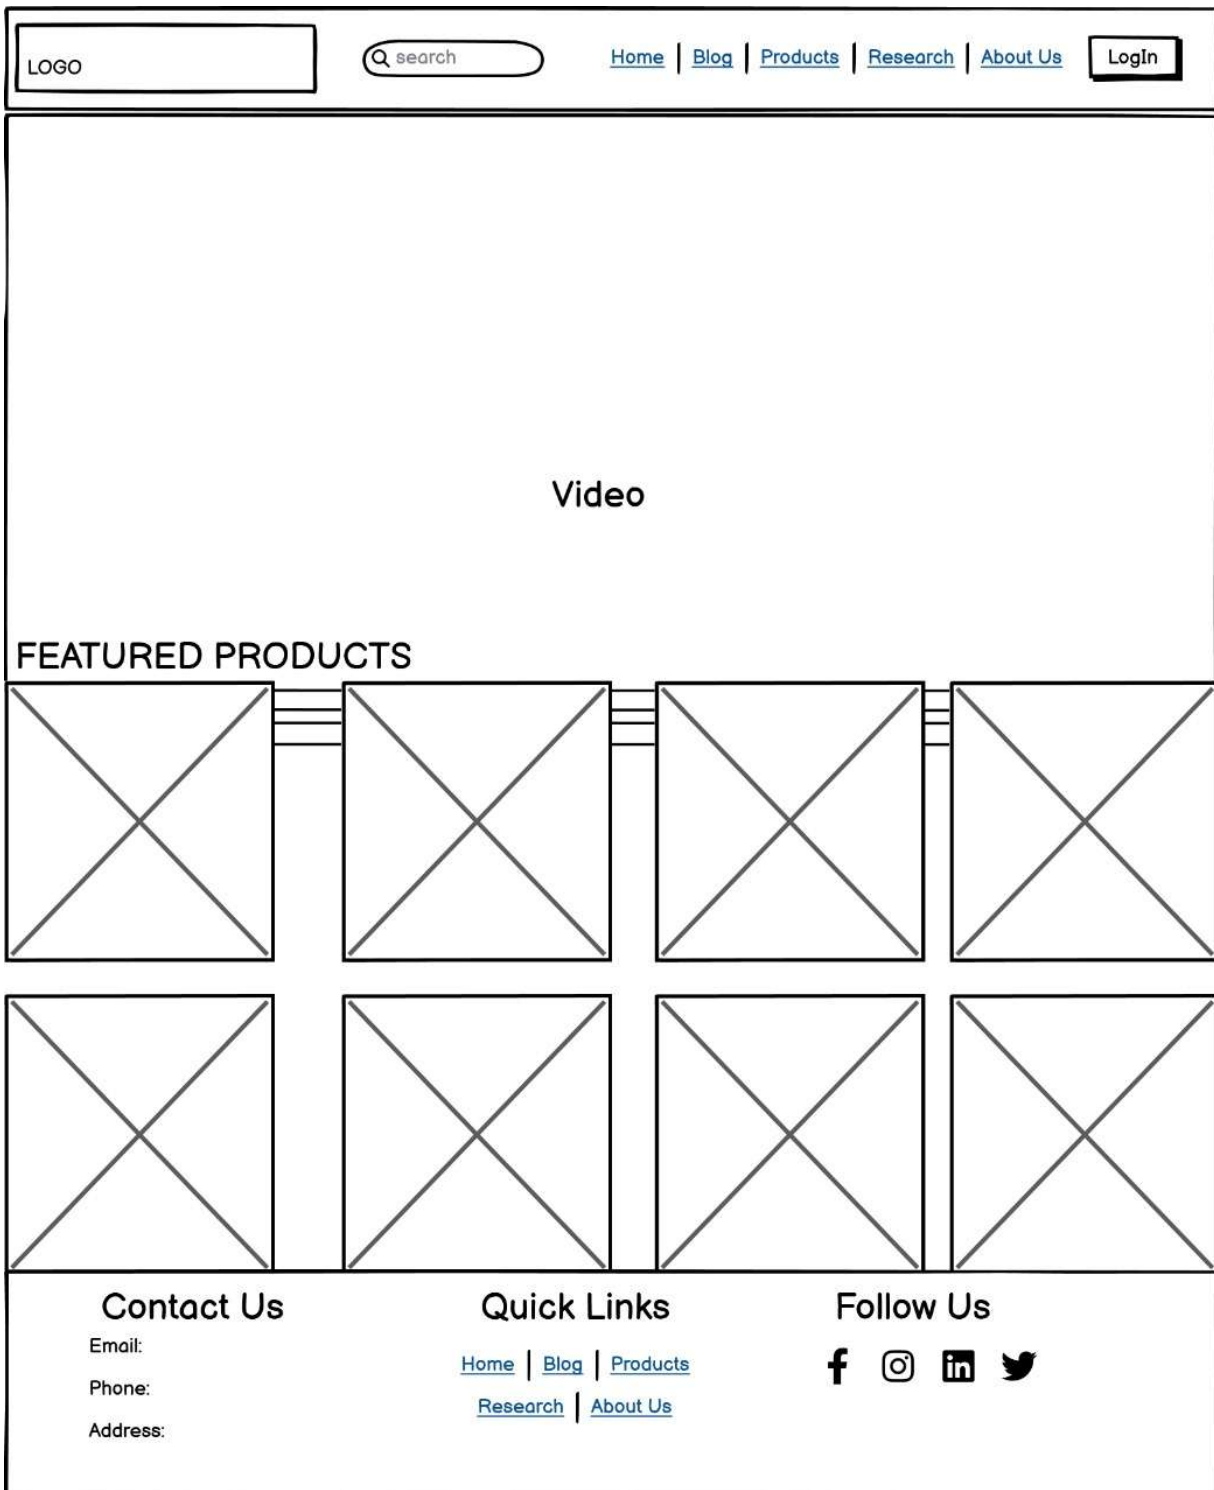

Figure 7 Wireframe Homepage

3.2. Products

We may view a variety of items that are available for purchase on the internet by visiting the product page. After browsing a variety of smartwatches, the customer can click "Add to cart" button to complete the order.
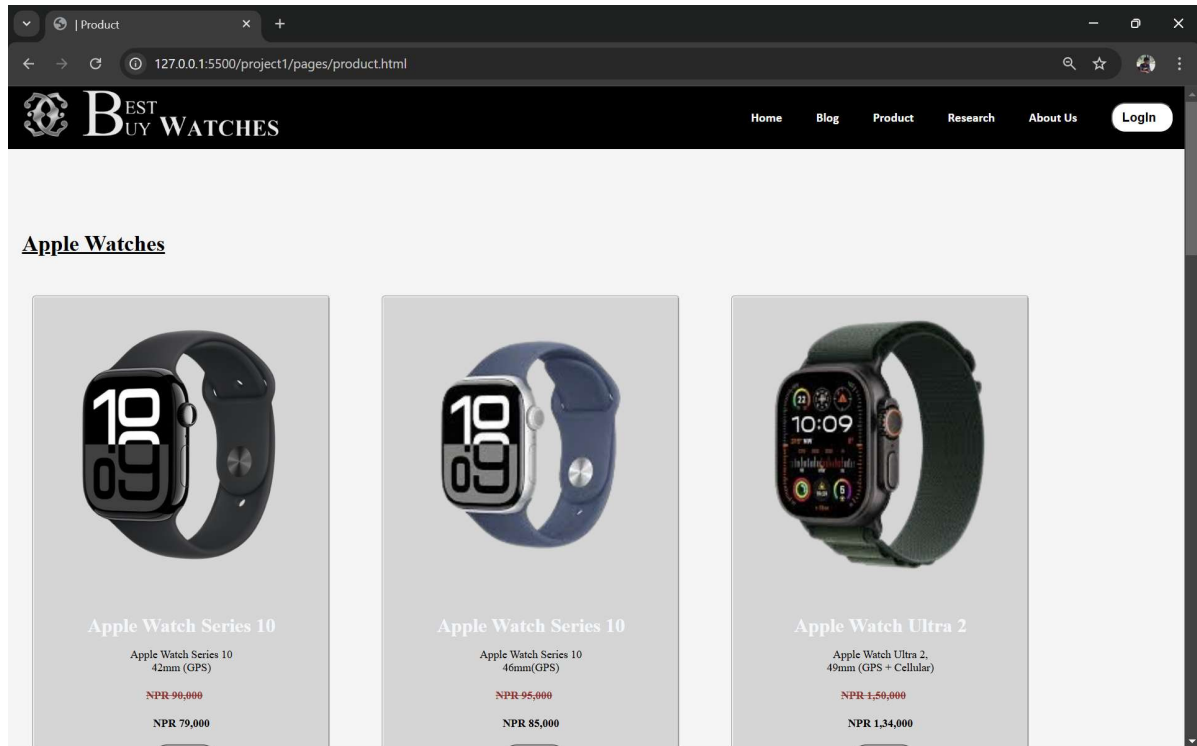

Figure 8 Products Web
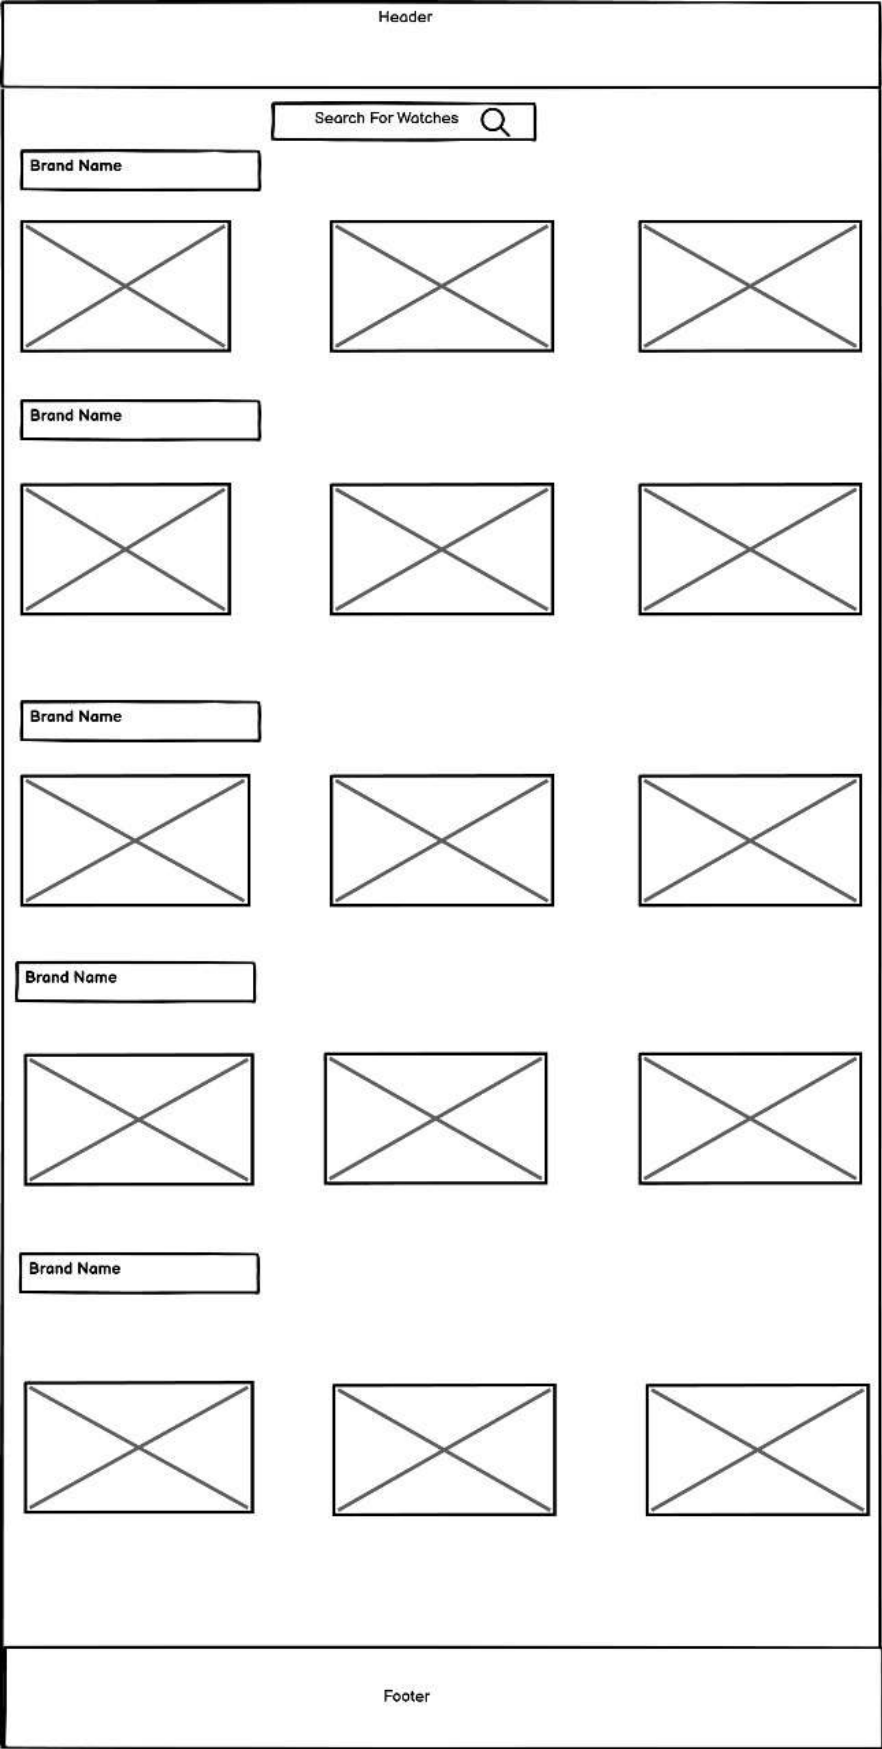

Figure 9 Wireframe Products

3.3. Blog

The blog section provides various information and updates regarding the technology and its evolution, boost of sales, rise of smartwatches and some information regarding the company whose items have been listed.

3.4.   About Us

In the about us page, the details of all the people who worked to make the project is listed and a feedback form is also provided to the user if they have any questions or any kind of feedback that is to be given to the developers of the website.

3.6. Login

In the login page, users can login their existing account or open a new account if they are new to the webpage for further purchase of listed items on the website.
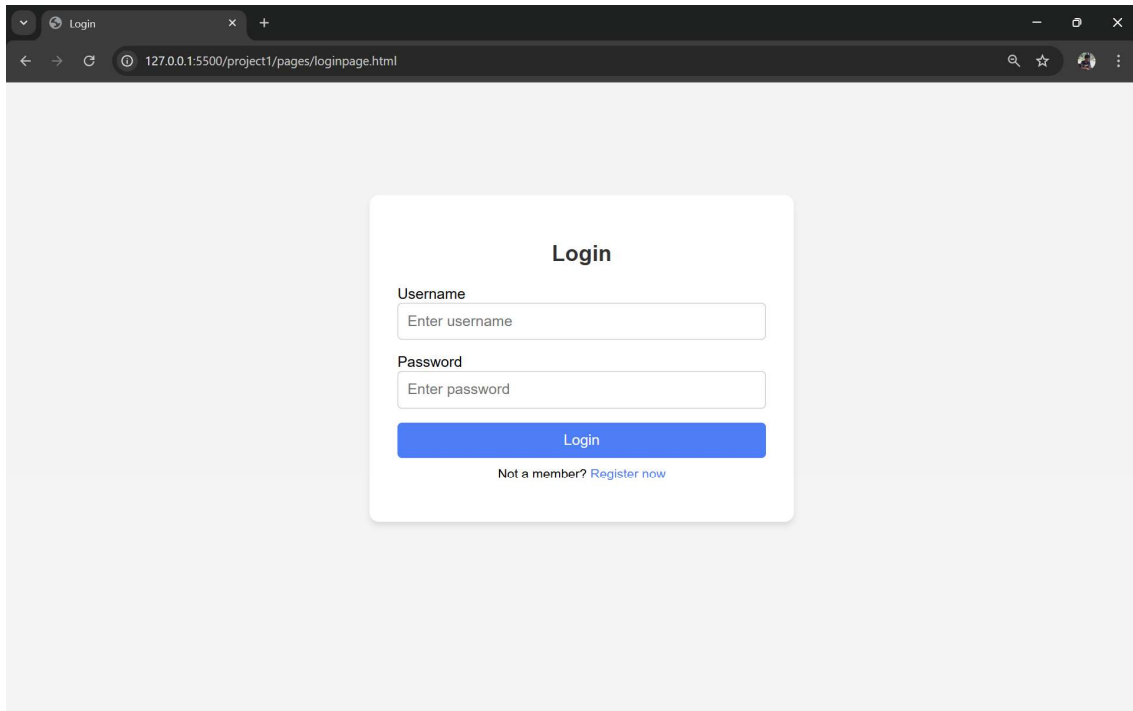

Figure 16 Login Web

4. Test Cases

The process of testing a website to see if it works is called testing. A web developer must check that pictures are shown correctly and that HTML elements are functioning correctly before launching a website. In addition, I'm going to make sure my website is still operational. We test the highlighted and important elements in the embraced website.

Test 4.1 Form Validation

Objective	To check whether the form is filled completely or not.
Action	Both fully and partially completing the form.
Expected Result	If the form is filled completely a pop-up appears saying "Successfully logged in" If the from is not filled completely a pop-up appears saying "Please completely fill the form".
Actual Test	The correct pop-up appeared.
Result	The test was successful.

Table 1 Form Validation
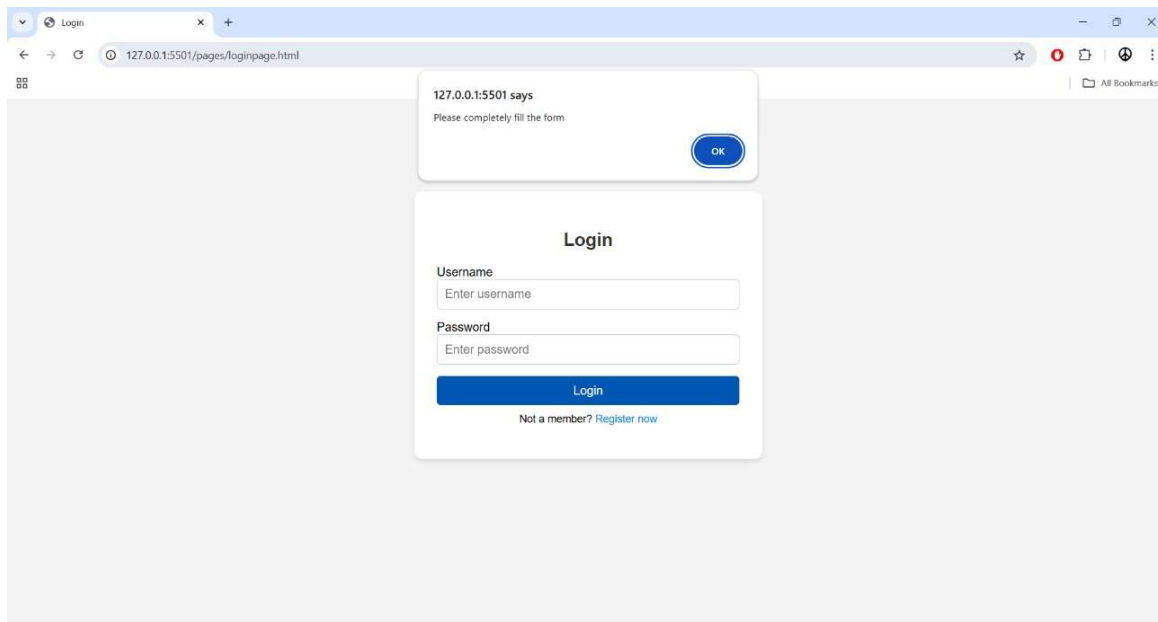

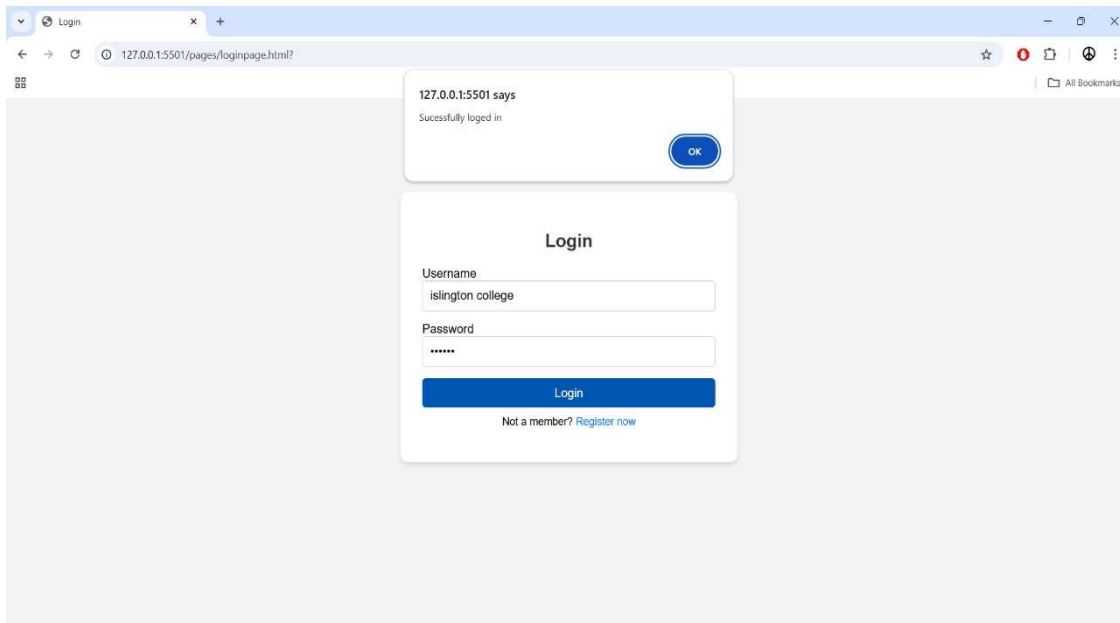

Test 4.2 Hoover Effect

Objective	To check whether the hover effect is working or not.
Action	The hover effect should change according to the cursor moved.
Expected Result	When clicked at the one of the options of navbar it should turn orange.
Actual Test	Yes, the hover effect worked and turned orange.
Result	The test was successful.

Table 2 Hoover Effect

Test 4.3: Display message while opening website

Objective	To check if the message is displayed after opening the Homepage of the website.
Action	Click the website link
Expected Result	The Message "WELCOME TO BEST BUY WATCHES!!" Should be displayed.
Actual Test	Opened the link.
Result	The test was successful.

Table 3 Display message while clicking the website
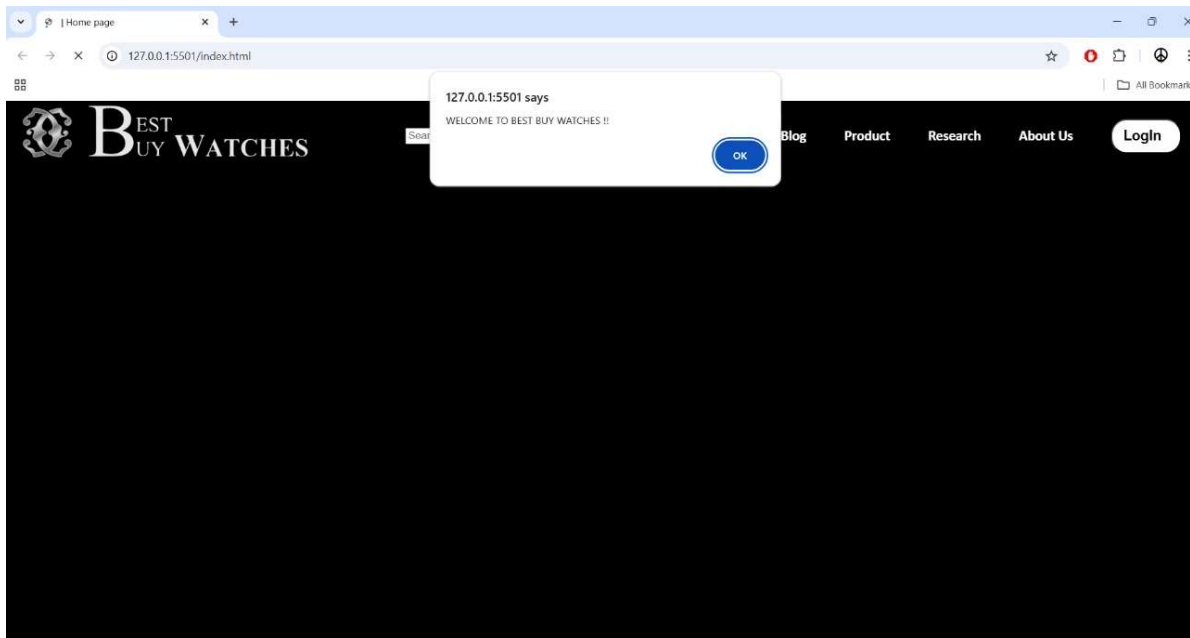

5. CONCLUSION

After putting in a lot of effort into the coursework, the team finally completed the coursework in time. We learnt how to collaborate as a team for the first time since starting college because it was group assignment. We studied a variety of languages, including JavaScript, HTML and CSS. The coursework was very hard to start because of our lack of proper knowledge in the programming languages but we eventually completed the project using various resource materials on the internet. Code with Harry was an important YouTube channel that we used as reference to learn the programming languages properly. The courses were well explained and well documented by the owner of the channel.

Being this project as our first project of Islington College, creating an e-commerce website on watch topic was also slightly challenging. Because it was new to the group members to record a project in a group adjusting the project documentation was also a little difficult. Due to various mistakes in the project, the testing phase took a long time. Also, the fact that many of the reference websites lacked authors made the research required to record the project even more difficult. However, the coursework was eventually finished and polished for submission.

            <h2 style="color: brown;">EVOLUTION OF WATCH TECHNOLOGY </h2>

            <p>Since their creation,watches have dazzled onlookers with their complex
mechanisms and cutting-edge technology.

                Wastches have always stimulated the imagination and benefited the
wearer, whether they are high tech mechanical devices

                driven by gravity or precise pendants that need to be wounf constantly.
The most

                common usage of modern timepieces may be as expensive fashion
ornaments, but underneath the dial is a fascinating history.

            </p>

        </div>

        <div class="card p1" style="font-size:23px ;">

            <h2 style="color: brown;">BOOST OF SALES</h2>

            <p>Time is everything. People need to wear a watch to keep up with their
appointments, set goals, meet deadlines, and check how

                much time they have left to finish a task. Watches come in different
designs, colors, and mechanisms, but they all play one

                role ,i.e telling the right time.<br><br>

                Ellaborating the online market or the online stores showcases watches to
global audience, enhancing visibility and sales potential.

                Today its very easy with AI-driven tools to reach specific required watch on
their preferences. Trend of collaborations among companies

                and well know people is able to introduce innovative features and attract
tech enthusiasts. Todays sales force doesn't necessarily need to face-to-face
```

to make a sales presentation. Softwares allow the salesperson to create a short presentation that customers can watch at their convenience.

For expansion,businesses also rely on acquiring and keeping customers. A consistently high level of customer service provides the company to keep their customers

within them or around them.

</div>

</p>

</div>

<div class="right colom">

<div class="card p1" style ="font-size: 22px;">

<h2 style="color: brown;">THE RISE OF SMARTWATCHES</h2>

<p>Smartwatches have emerged as a significant player in the wearable technology market. One of the primary attractions of

smartwatches is their ability to integrate seamlessly with smartphones.Users can receive calls,read messages, and even

respont to them directly from their wriests,eliminating the need to constantly check their phones.

</p>

</div>

<div class="card p1" style ="font-size: 22px;">

<h2 style="color: brown;">OVERALL CONCLUSION</h2>

<p> The watch business has undergone a transformation thanks to technology, which has a turned conventional timepieces into multipurpose

devices that meet contemporary needs. Although there is no denying the advantages of technological integration, there are drawbacks as well.
